

Turbines in local schools - Evance Iskra R9000

Erection of a 5Kw wind turbine measuring 10.4 metres to the centre point of the hub. The turbine has a rotor diameter of 5.5 metres and consists of a dark grey turbine head with matching dark grey composite blades supported on a galvanized steel tower which is a tilt up/down type with hinge at base plate.

Note (May 2013) The above is a plan taken from documents on the Highland Council website with the approximate location of the football pitch superimposed by BH as an indication of its proximity to the turbine. Initially there was no fence around the base of this, or any other, turbine.
